Experience

OmniLab by 21Factory (Startup)

Jul 2025 – Present

Mid-level Software Engineer

Casablanca, MA

- Being the **Domain Expert** for two core microservices, overseeing end-to-end architecture, feature delivery, and system reliability under high load.
- Led the migration from Datadog to **ClickStack**, slashing observability costs while maintaining production-grade monitoring and alerting.
- Architected services using **Domain-Driven Design (DDD)** and Hexagonal Architecture to ensure long-term maintainability and scalability.
- Optimized data consistency protocols and implemented automated QA testing suites to ensure system integrity during rapid scaling.
- Designed high-performance inter-service communication using **gRPC** and Google AIP standards.

Software Engineer

Sep 2024 – Jul 2025

Full-stack Developer

Casablanca, MA

- Engineered immersive AR experiences using **Three.js**, resulting in a **35% increase** in user engagement for the gamification SaaS platform.
- Identified and resolved critical production bottlenecks, reducing average API latency by **40%**.
- Developed and maintained responsive user interfaces using **React.js** and **Next.js**, aligned with backend microservices.
- Technologies: Go, gRPC, Kubernetes, Docker, Three.js, Datadog, TDD.

Oracle Corporation

Jan – Jun 2024

Research Assistant (Back-End), Internship

Casablanca, MA

- Improved and automated testing processes for **Graal Cloud Native Guides** (graal.cloud/gcn/guides).
- Developed new features and fixed bugs for a **notebook-based data science platform** (Oracle Labs Data Studio).
- Worked on **Jupyter integration**: themes, system file access, and embedding Jupyter via iframes.
- Technologies: Javascript, TypeScript, Python, Jupyter Lab, Docker, Kubernetes.

Projects

ResumeForge AI (Microservices Monorepo) | Go, Node.js, Next.js, gRPC, MongoDB, Redis

- Engineered a distributed AI-powered resume system using a **monorepo architecture** managed with **Turborepo**, featuring dedicated services for Auth, Profile Management, and AI Matching.
- Implemented secure inter-service communication using **gRPC** for internal binary calls and REST for external client-facing APIs.

JOYO: Mental Health & Self-Awareness Platform | Go, Docker, PostgreSQL, OpenAI API, DDD

- Spearheaded the backend development for the public launch, implementing core features driven by **Domain-Driven Design (DDD)** principles.
- Architected an **AI-driven self-exploration engine** using LLM integrations to generate personalized user prompts based on historical engagement data.
- Optimized the development lifecycle by implementing **TDD**, hot-reloading environments, and reducing Docker image sizes by 45% for faster CI/CD deployments.
- Enhanced system performance and reduced API latency by implementing efficient caching strategies and database query optimization.

SimpleBank: High-Consistency Financial Backend | Go, PostgreSQL, Kubernetes, AWS, gRPC

- Built a transactional banking system in Go, implementing **DB isolation levels** and ACID-compliant transfers to ensure zero data loss during concurrent operations.
- Designed a dual-protocol server handling **gRPC and HTTP/REST** simultaneously via gRPC-gateway, documented with integrated Swagger UI.

- Deployed to **AWS EKS (Kubernetes)** with a fully automated **CI/CD pipeline** using GitHub Actions, Docker, and AWS ECR.

SENDIT: Full-Stack Delivery Network Application | *React, Node.js, MongoDB, Neo4j*

- Architected a logistics platform using the MERN stack integrated with **Neo4j Graph Database** for shortest-path route optimization between 50+ Moroccan cities.
- Supports multi-hop deliveries across disparate logistics providers, optimizing for both speed and cost.

Education

National Institute Of Posts And Telecommunications (INPT)	Sep 2022 – Jul 2024
<i>Engineer Degree: Data and Software Engineering</i>	<i>Rabat, MA</i>

Technical Skills

Programming Languages: Golang, JavaScript, TypeScript, Java, Python, Bash.
Backend & Architecture & Practices: Microservices, Agentic Engineering, Event Driven Architecture, Domain-Driven Design, Hexagonal/Clean Architecture, gRPC, Google AIP, REST APIs, Caching, QA testing, Atomic counters, TDD, OLAP
Observability & Monitoring: Datadog, OpenTelemetry, ClickStack, ClickHouse.
DevOps & DevSecOps & Cloud: Docker, Kubernetes, GitLab CI/CD, SAST, DAST, SCA, Trivy, Snyk, AWS.
Frontend: React.js, Next.js, Three.js, TailwindCSS.
Databases: PostgreSQL, MongoDB, MySQL, Redis.
Tools: Git, Cursor, Claude Code, JIRA, Confluence, Linux.
